CRYPTO MERCHANT PLATFORM

Crypto payments infrastructure for people who mean business.

BTC · USDT live · API ready · Dashboard · Real clients · Already running

Most business want crypto. Almost none can accept it.

Traditional payment providers don't support crypto. Building your own infrastructure takes 12+ months of engineering work. Most businesses either give up or lose customers every day — not because they don't want crypto, but because the payment rails simply don't exist.

No ready infrastructure
10 bps. PayPal, Stripe — none of them support crypto merchant acceptance.

Engineering barrier
Building crypto payments requires blockchain specialists and months of ongoing work.

Real revenue lost
Crypto-holding customers can't pay. Business can't reach them. The gap is widening.

A ready-to-deploy crypto payments stack. No blockchain team required.

Dashboard, API, payment links, JS checkout — all production-ready. Business go live in hours, not months.

- Merchant admin dashboard & payment management
- Integration-ready API
- Payment links & invoice flows
- JavaScript checkout for websites
- Email & smartphone payment flows

Live and operational.

Core infrastructure is already built. New currencies activate without redesigning the platform.

Not a prototype. Business are already using it.

CURRENCIES READY

Real operational validation. Business workflows implemented and tested. This is a working crypto payment business — not an early-stage idea.

Crypto payments aren't a trend. They're a missing payment rail.

01
Global access
Accept payments from any customer worldwide, with no borders, dependencies or country restrictions.

02
No chargebacks
Crypto transactions are irreversible. Business get paid — no disputes, no overhead.

03
Underserved markets
Traditional rails are limited in 50+ countries. We close this the gap — NextWayPay provides the infrastructure.

Five reasons this is hard to replicate from scratch.

01
Working product
Live and tested in real business workflows.

02
Fast expansion
New currencies activate fast — no redesign needed.

03
Multi-method
Dashboard, API, links, JS, Technical and non-technical merchants served.

04
Online + offline business
Clean path from web payments to mobile terminal for in-person use.

05
12+ months saved
Acquiring this eliminates a full engineering cycle.

Multiple revenue streams. One strong core.

Transaction fees
Volume-based revenue grown directly with payment flow. Scales automatically with business grow.

Subscriptions
Monthly access. Predictable, recurring income alongside transaction commissions.

Enterprise & white-label
Customized deployments and branded solutions for high-volume clients who want payment layer.

Hybrid model: low monthly fee + transaction commission = predictable + scalable revenue

Online today. In-person tomorrow.

EIGHT TERA
Hardware NFC, EPS, HMB. Onboard now business. Improve checkout UX and analytics.

MID TERM
Expand currency support. Business automation tools. Advanced reporting and compliance.

VISION
Mobile app as a crypto POS terminal — cafes, shops, freelancers. Any smartphone accepts crypto.
